Company Profile

Creative Breakthroughs, Inc. (CBI) is an IT services consultancy and a leader in network security, integration and management. CBI enables companies to more effectively manage their IT infrastructure and business processes - at a lower total cost.

In 1991 the company began providing security-focused IT products, services and consulting to public, private and non-profit organizations from SMB to the Fortune 50. CBI has rich experience serving the needs of all verticals such as Health Care, Legal, Banking, Financial Services, Manufacturing, Education, Government and Retail.

CBI's product, service and solution capabilities extend across its professional services, managed services, assessment services and systems integration departments.

Capabilities Summary

Professional Services

CBI has three pro services practices – compliance, security, and availability. Each Engineer / Consultant maintains the technical capabilities and certifications required by the partner of choice or market leader relevant to the practice. All CBI practices hold national acclaim in these business critical areas. The security and compliance practices offer proprietary products and services.

Systems Integration

The company provides complete solutions - applications / hardware / services. We assess the environment, business model / processes, design the solution, deploy and provide the knowledge transfer, documentation and support. CBI works through direct engagement with the customer, through vendors and through horizontal collaboration.

Assessment Services

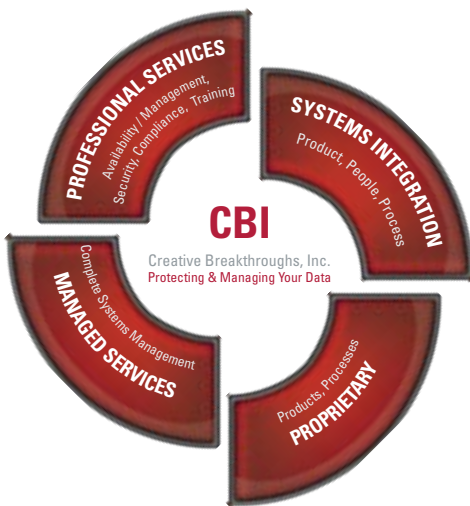

The company provides vulnerability assessments, identity management readiness, social engineering and network penetration tests, as well as audits (PCI, SOX, etc.), security roadmap services and technology roadmap services.

Training Services

CBI conducts training in CISSP, product management, security awareness, product training and training in other areas.

Managed Services

CBI covers the desktop to the gateway including complete systems management or project work (e.g. SIM, antivirus, patch management, security management, etc.). We also provide outsourced CISO and information security services.

Market Coverage

CBI has completed 198 engagements over the last two years in 34 states and across three countries. We have exceptional people today in New York, Pacific Northwest, North Carolina, Georgia, Northern Illinois, Central & South Texas, Southeastern Michigan and other locations.

Differentiation

Technical competency alone does not enable the optimal value contribution. To provide the leadership and ROI levels customers deserve, Creative Breakthroughs personnel maintain not just the technical expertise for the required solution, but the relevant business acumen as well (e.g. business processes, organizational / departmental functions, business models, regulations, etc). This dual competency is consistently identified by our partners, vendors and customers as CBI's differentiator. Our team is one of the industry's most experienced as evidenced by the 194 years of industry-specific experience and 43 professional certifications.

Professional Services

Security

Manage and secure infrastructure, information, and interactions against a rapidly growing array of increasingly sophisticated threats.

Endpoint security

Improve threat monitoring and burden of protecting critical network endpoints.

Security Management

Link security policies to processes to identify threats, prevent loss of critical data and optimize IT resources.

Messaging Security

Use of anti-spam, antivirus and content filtering technologies to protect against threats from email and instant messaging.

Network Security

Identify vulnerabilities and reduce costs due to data loss, unplanned downtime, and legal exposure.

- Network Access Control
- Endpoint Management Suite
- Incident Response & Management
- Endpoint Encryption
- Security Information Manager
- Brightmail Gateway / Message Filter
- Others

Information Risk and Compliance

Ensure compliance with external regulations and internal policies for securing and managing information.

IT Compliance

Standardizing compliance processes through automation of compliance processes, reporting, and remediation

Discovery and Retention Management

Capture, classify, and store email, instant messages, and files with a comprehensive platform for enterprise archiving

Data Loss Prevention

Define and automatically enforce policies to prevent loss of confidential data to mitigate legal and regulatory risks

Messaging Management

Reduce the infrastructure and administrative costs of operating and managing multiple email messaging systems.

- Data Loss Prevention
- Enterprise Vault™
- Control Compliance Suite
- Security Information Manager
- Others

Infrastructure Operations

Standardized, automate, and consolidate infrastructure operations to reduce complexity and costs, and improve efficiency.

Server Management

Automate the configuration, provisioning, patching, and resource utilization for applications and IT services.

Endpoint Management

Reduce operational costs and protect Windows-based servers, desktops, laptops, and mobile devices.

- Altiris™ Client & Server Management Suites
- Altiris Total Management Suite
- Endpoint Management Suite
- Altiris Deployment Solution
- Others

Business Continuity

Define, implement, and manage solutions to protect against the effects of planned and unplanned downtime.

Disaster Recovery

Define, test, and implement disaster recovery strategies with automated solutions for backup and recovery, server clustering, and data.

High Availability

Keep critical application up and running by protecting against planned and unplanned downtime.

- Veritas NetBackup™
- Veritas NetBackup PureDisk™
- Backup Exec™
- Veritas Cluster Server
- Others

Storage

Optimize the way information is managed throughout its lifecycle.

Archiving

Automate the retention and storage of email, files, instant messaging and other content.

Backup and Recovery

Prepare for and recover from equipment failure or accidental loss of data.

Storage Management

Standardize and automate the management of heterogeneous storage platforms.

- Veritas Backup Reporter
- Enterprise Vault™
- Veritas Storage Foundation™
- Others
